

CHATTERUP (MESSAGING APP) USING PHP

ChatterUp is a messaging application that can be developed using PHP, a widely-used server-side scripting language, along with MySQL for database management. Talking about the project, a user can sign in or simply sign up if he/she doesn't have an account. Personal, contact details, college name, and password should be provided in order to create new account. The application supports real-time messaging through AJAX, allowing for seamless message without page refreshes. A user-friendly interface displays active conversation and enables easy message sending. All account created and messages are stored in a MySQL database, ensuring users can access their account created and chat history.

INSTALLATION GUIDE:

Step 1: Download the zip file from the repository and extract it.

Step 2: Move your extracted file to your web server's root directory ('htdocs' for XAMPP, and 'www' for WAAMP).

Step 3: Open your XAMPP and run the Apache and MySQL.

Step 4: Open your web browser and type the 'localhost/PHP_ChatterUP' in your URL. You should see The ChatterUp log in page.
